Presentación

El Departamento Administrativo Nacional de Estadística —DANE— da a conocer con la presente publicación las características del sector manufacturero en 1984, de acuerdo con las variables investigadas en la Encuesta Anual Manufacturera.

La encuesta, que cubre los establecimientos con 10 o más personas ocupadas, obtiene información sobre el número de establecimientos, personal ocupado, remuneraciones causadas, producción bruta, consumo intermedio, valor agregado, consumo de energía eléctrica, inversión en activos fijos, inventarios, gastos generales y gastos industriales, a nivel artículo, obtiene la producción efectuada durante el año y las materias primas, materiales y empaques consumidos

Los cuadros estadísticos que conforman esta publicación presentan a nivel nacional, restímenes por grupos y agrupaciones industriales de la CHU¹, por escalas de personal y del valor de la producción y según la organización jurídica de los establecimientos investigados. Asimismo, la información se presenta a nivel de áreas metropolitanas y secciones del país.

En los apéndices se encuentran los códigos y escalas que facilitan la interpretación de los resultados.

La metodología empleada en la investigación será presentada, próximamente, en una publicación especial dentro de la serie Documentos del DANE.

NOTA: A partir del Tercer Censo Industrial— 1970— el marco a investigar por la Encuesta Anual Manufacturera lo constituyen los establecimientos industriales con 10 o más personas ocupadas. Sin embargo se procesaron entre 1971 y 1982 algunos establecimientos con ocupación inferior en razón a que en la encuesta inmediatamente anterior am-

pleaban 10 o más personas y por lo tanto quedaban incluidos en el directorio de cuentas a investigar.

A partir de la encuesta correspondiente al año 1983, únicamente se procesan los establecimientos que emplean 10 o más personas.

Escala de valor de la producción

Metodología de las nuevas escalas del valor de la producción

La escala de valores de la producción por medio de la cual se han venido clasificando los establecimientos Industriales fue concebida y aplicada a partir de la Encuesta Anual Manufacturera de 1970.

Para dicho año, la escala y sus correspondientes rangos reflejaban la estructura del sector medida a través de los valores de producción de los establecimientos encuestados.

Un estudio comparativo de la evolución del sector, entre 1970 y 1980, tomando como base el comportamiento de la participación de las diferentes variables, mostró una alta concentración en los rangos superiores de la escala.

En dicha concentración intervienen decisivamente dos elementos básicos: el incremento real de la producción industrial, medida en términos de valor de la producción, y la ausencia del efecto inflación en los rangos de la tabla utilizada.

Al no tener en cuenta el efecto producido por la inflación en los rangos de la escala, los valores de producción de los establecimientos, que si están influenciados por éste, al asimilarse a la escala generan una tendencia a la concentración en los rangos superiores.

A partir de estas consideraciones surgió la necesidad de modificar la tabla de tal manera que reflejara el efecto de los incrementos de precios en sus rangos, neutralizando así este efecto, y permitiendo medir los cambios atribuibles únicamente a las variaciones en la producción de los establecimientos.

Sin embargo, no se trata de elaborar arbitrariamente una nueva tabla de clasificación sino de actualizar los rangos de la que se habrá venido utilizando. Se adoptó como el índice más apropiado en esta actualización el Índice de Precios empleado por la Muestra Mensual Manufacturera¹, ya que ésta contempla, a nivel de agrupación Industrial, los incrementos diferenciales en los precios, factor que el Índice Promedio Nacional no permite incorporar.

Se construyó para cada agrupación Industrial una tabla que establece en pesos corrientes de 1981, equivalentes a pesos de 1970, los límites de cada rango.

Es importante anotar que la información que aparece en el cuadro 3.1 corresponde al resultado de la suma de los temas de cada agrupación.

A continuación se relacionan los índices utilizados y las tablas resultantes.

Apéndice 6 Glosario de términos y conceptos utilizados ¹

Industria manufacturera

Para efectos de las investigaciones estadísticas, se define como la transformación mecánica o química de sustancias orgánicas e inorgánicas en productos nuevos, ya sea que el trabajo se efectúe con máquinas o a mano, en fábrica o a domicilio, o que los productos se vendan al por mayor o al por menor. Incluye el montaje de las partes que componen los productos manufacturados, excepto en los casos en que tal actividad sea propia del sector de construcción.

Unidad estadística

El establecimiento industrial es la unidad estadística a la cual se solicitan los datos requeridos por el Registro Industrial y la Encuesta Manufacturera, y se define como la combinación de actividades y recursos que realiza una unidad propietaria o administradora, para la producción del grupo más homogéneo posible de bienes manufacturados, en una localización única, y de la cual se llevan registros contables independientemente sobre los materiales, mano de obra y otros recursos físicos que se utilizan en el proceso de producción y actividades auxiliares o complementarias; entendiéndose como actividades auxiliares las que proveen bienes y servicios al establecimiento, que no llegan a ser incorporadas en el producto terminado y que se toman como parte de las labores y recursos de la unidad estadística.

Personal ocupado

Es el número de personas ocupadas en el establecimiento, o sea el total de las que trabajan en él, incluidos los propietarios que trabajan, los socios activos y los trabajadores familiares no remunerados. Los datos sobre personal ocupado se solicitan por categorías ocupacionales, según conste en las nóminas de pago de la semana que incluye el 15 de noviembre de 1984, o la fecha más próxima a este para la cual se dispone de datos.

Sueldos y salarios

Se define como la remuneración que recibe el trabajador en dinero o en especie, en forma periódica o diferida, por los servicios que presta a los establecimientos industriales, antes de deducir los descuentos por retención en la fuente, contribuciones al Seguro Social, al Sindicato, al Fondo de empleados y similares.

Prestaciones sociales

Comprende los pagos obligatorios o voluntarios diferentes a los sueldos y salarios que el empleador efectúa a sus em-

pleados, tales como las prestaciones patronales comunes, las prestaciones patronales especiales y demás contempladas en el Código Sustantivo del Trabajo.

Producción bruta

El valor de la producción bruta es igual al "valor de todos los productos del establecimiento" más los "Ingresos por trabajos industriales o servicios proporcionados a otros", más el "valor de los bienes expeditos en la misma condición en que se recibieron", más el "valor de la electricidad vendida", más el "valor del trabajo en curso al fin del año", menos el "valor del trabajo en curso al principio del año", más los impuestos indirectos.

La producción bruta, así definida, corresponde a una valoración a "precios de productor".

Dados los múltiples inconvenientes presentados por los informantes para valorar su producción incluyendo estos impuestos, que se causan solo en el momento de la venta del artículo, el Departamento optó, a partir de la encuesta de 1980, por solicitar la producción del establecimiento sin los impuestos indirectos. Para obtener la información sobre dichos impuestos se incluyó en el formulario un nuevo capítulo de tal forma que mediante programa especial se pudieran adicionar las dos variables, conservándose así de una parte la comparabilidad de las cifras sobre producción bruta con las de encuestas anteriores y de otra garantizando su valoración a precios de productor.

Es importante notar que la información, a nivel artículo, publicada en el cuadro 17.1 no tiene incluido el valor de los impuestos indirectos causados.

Consumo intermedio

Se define como el valor de los insumos consumidos en el proceso productivo. Incluye el valor del consumo de materias primas nacionales y extranjeras, los gastos industriales imputables a la producción, la energía eléctrica comprada y los impuestos indirectos.

Al igual que la producción bruta, el consumo intermedio así definido, se valora a precios de productor, definición que obliga a la inclusión de los impuestos indirectos causados.

A partir de la Encuesta de 1980 el valor del consumo de materias primas requerido por el establecimiento en su proceso productivo se solicitó sin dichos impuestos, obteniéndose la información sobre estos por separado (dadas las mismas razones aducidas para el cálculo de la producción bruta) y adicionándose luego, tal como aparece en el cuadro 9.1 "componentes del consumo intermedio".

La información publicada, a nivel artículo, en el cuadro 16.1 no tiene incluido el valor de los impuestos indirectos causados.

¹ Para mayor información sobre definiciones básicas pueden consultarse, entre otros, "Recomendaciones para el programa mundial de estadísticas industriales de 1973, Naciones Unidas, serie M., No. 54 (parte II)".

Valor agregado bruto

Es el total de los ingresos percibidos por el uso de los factores productivos (tierra, trabajo, capital, organización empresarial), participantes en el proceso de producción durante el período estudiado. El DANE obtiene el valor agregado de la industria manufacturera deduciendo del valor de la producción bruta el valor del consumo intermedio.

Energía eléctrica consumida

Comprende el consumo en KWH de la energía eléctrica, ya sea comprada y/o producida por el establecimiento.

Gastos industriales

Bajo este rubro se presentarán los valores de ciertos gastos que siendo importantes para el mantenimiento y funcionamiento de las plantas industriales no son consideradas en ningún otro ítem. El DANE señala seis (6) tipos de gastos industriales así:

- a) Accesorios y repuestos de duración menor de un año
- b) Combustibles y lubricantes consumidos
- c) Pagos por trabajos de carácter industrial realizados por otros establecimientos
- d) Pagos a trabajadores a domicilio
- e) Pagos por trabajos de reparación y mantenimiento efectuados por terceros
- f) Valor de compra de materias primas y otros productos vendidos sin transformación

Gastos generales

Esta clase incluye el costo de todos los servicios no industriales prestados por otros establecimientos o particulares

pagados por el establecimiento informante y reflejados en el valor de su producción durante el año. Estos gastos se han discriminado en la siguiente forma: arrendamiento de inmuebles, alquiler de maquinaria y equipo, servicios profesionales (honorarios), intereses sobre créditos, seguros (excepto seguro social), agua, correo y teléfono, publicidad y propaganda, depreciación, pago de regalías y otros gastos.

Variaciones de las existencias

Su objetivo es el de detallar el valor de los elementos componentes de las variaciones globales de las existencias al principio y al final del año, bajo los siguientes conceptos:

- a) Materias primas, materiales y empaques
- b) Productos en proceso de fabricación
- c) Productos acabados

Inversión bruta

Comprende la suma de las inversiones en los activos fijos nuevos, los usados y los fabricados para su propio uso, las ventas de bienes similares y la revaluación.

Los activos fijos se dividen en cinco clases: terrenos adquiridos para fines industriales, edificios y estructuras, maquinaria y equipo, equipo de transporte y equipo de oficina. La inversión neta es el resultado de sustraer de la inversión bruta la depreciación efectuada en el año.²

Valor en libros de los activos fijos

Determina el valor contable (en libros) que tienen los activos fijos descontada la depreciación acumulada.
