## Presentación

Una vez más, el Departamento Administrativo Nacional de Estadística –DANE– pone a disposición del público el compendio de información consolidada para el nivel municipal durante el año 1991.

El DANE, cumpliendo con su función de divulgar y distribuir la información producida por el país, y, dada la continua y creciente demanda relativa a los municipios, que ha sido generada por el proceso de descentralización, presenta una actualización del conjunto básico de estadísticas de utilidad para la planeación y gestión de las entidades locales.

De esta manera el DANE continúa con la configuración del Sistema de Información Territorial (SIT), respondiendo a la dinámica de una sociedad en permanente transformación.

RODOLFO URIBE URIBE  
Director

Notas metodológicas

Cuadro 1. Año de creación, proyección quinquenal de población y tasas de crecimiento, por municipios, 1985–2000

---

## 1. Proyecciones de población municipal

### Notas metodológicas

Para proyectar la población de los municipios colombianos, se utilizó el Método del diferencial de crecimiento, el cual consiste en proyectar las proporciones de población de cada municipio, suponiendo que existe una diferencia constante o variable entre las tasas de crecimiento del municipio y el resto del departamento, lo cual implica una evolución de la proporción de población de cada municipio, en forma logística. Para las presentes proyecciones municipales, se asumió que en cada quinquenio, el diferencial de crecimiento variaría disminuyendo en la mayoría de los casos. Con el anterior supuesto, las tasas de crecimiento de los municipios que presentan una evolución creciente, irían disminuyendo, siendo consistente este supuesto con la evolución de la fecundidad y la mortalidad que hacen disminuir el crecimiento natural y la disminución del crecimiento migratorio, por el mayor desarrollo que se puede dar en cada uno de los municipios. De igual manera, para los municipios cuyo crecimiento intercensal presentó una evolución negativa, debido a la emigración, se supone que, con la mayor independencia administrativa con que cuentan ahora, el ritmo decreciente que traían disminuya, y varios de ellos pueden llegar a recuperarse y obtener tasas positivas.

evolución del porcentaje de población del resto del área mayor se definió como:

$$\frac{R_{t+n}}{N_{t+n}} = \frac{1}{1 - (S_t/R_t)e^{-[d'(t+1) + d'(t+2) + \dots + d'(t+n)]}}$$

donde:

- $d'(t+1)$  es el diferencial asumido para un año después de la última información,
- $d'(t+2)$  es el diferencial asumido para el segundo año después de la última información, ..., y
- $d'(t+n)$  es el diferencial asumido para el año de la proyección

Adicionalmente, en los casos donde los municipios fueron creados entre 1973 y 1985, y su evolución en el período intercensal no era razonable, pues no existía una

sustentación aparente para su evolución, se optó por unir los municipios nuevos que habían sido creados, conservándose la entidad territorial existente en 1973 y posteriormente, desagregarlos de acuerdo con su participación en el Censo de 1985. De igual manera, aquellos municipios que fueron creados con posterioridad al Censo de 1985, se proyectaron con base en la población de los municipios originales, y posteriormente se distribuyó de acuerdo con la proporción de población que se les había asignado al momento de su creación. Para la aplicación del método del diferencial de crecimiento, se requiere contar con la población en dos momentos diferentes (por ejemplo dos censos), para cada desagregación geográfica requerida.

### Municipios de creación reciente

Los municipios que se listan en este sector, son los creados o fundados con fecha de corte el 31 de diciembre de 1990. La ausencia de cifras de población censada en 1973 y 1985, se debe al hecho de creación del municipio, que ocurrió en fecha posterior a las censales. Con respecto a la columna del censo de 1985, se advierte sobre los municipios que cedieron población, que éstos aún conservan la población perteneciente a los nuevos municipios, es decir que no se sustrajo.

### La proyección nacional

En 1989 se realizaron las proyecciones nacionales de población, las cuales fueron revisadas durante la ejecución de las proyecciones subnacionales. Durante esta etapa se encontró que la estructura de la fecundidad que se había utilizado en el período 1975-1985, y especialmente durante el quinquenio 1970-1975, no correspondía a las estimadas en el Censo de 1973 y la Encuesta Mundial de Fecundidad de 1976. Dado lo anterior, se acordó corregir las estructuras, lo que repercutió en el número de nacimientos proyectados en los tres quinquenios y por tanto en la población estimada al 15 de octubre de 1985.

De igual manera, a la luz de los nuevos resultados, obtenidos en las encuestas de prevalencia, demografía y salud, realizadas en 1986 y 1990, e incluso los obtenidos en el Censo de 1985, donde se evidenciaba un mayor descenso del que se había proyectado, tanto de la mortalidad infantil como de la fecundidad, se resolvió modificar estos parámetros para el período de la proyección posterior a 1985.

Dado lo anterior, los resultados de la proyección de población de Colombia que aparecen aquí, difieren de los presentados en la publicación de febrero de 1991.
